# X Post Search

In X Search, you can filter by:

## Tweet content filter

- **contains keyword:** Add keywords here to be matched to tweet content. Tweets containing either of these keywords will be collected in the next step. When you put quotations ("") around the word, the search tool will search for that exact word. When you enter the word itself, the search tool may return results that contain that word embedded in another word.
- **does not contain keyword:** Add keywords here to be excluded from the signal created from to tweet content. Tweets containing neither of these keywords will be collected in the next step.
- **contains hashtag:** This will return tweets that contain the specified hashtags.
- **mentions account:** This will return tweets that mention the entered account in the tweet content.
- **is posted by:** Add accounts here for which you'd like tweets that have been posted by these accounts to be collected.

**Twitter Search**

1 Search Twitter    2 Select tweets    3 Create segment

Filter through tweets by keywords & hashtags it contains, who posted, accounts it mentions

**Filter Tweets by**

contains keyword    mentions account

marketing    OR    @blaze\_ai    OR

contains keyword

Web3    OR

AND

contains hashtag    is posted by

#marketing    OR    @larfy\_rothwell, @MahapatraCh    OR

Twitter post search example

 You can create combinations of filters using AND and OR

Finally, name your search something that represents the search results you're expecting and click "search tweets."

 Note: You can only fetch 100 tweets per search

## Engagement Filters

Only fetch tweets when they have a specific level of engagement associated to them

**Engagement Filters**

Leave value empty if not applicable

**Likes**    **Retweets**    **Replies**

Min    Max    Min    Max    Min    Max

Search Name
